Front cover picture: Tetrahydrobiopterin (BH<sub>4</sub>) regulates pulmonary vascular tone by promoting nitric oxide synthase (NOS) coupling, balancing the generation of nitric oxide (NO) and superoxide (O<sub>2</sub><sup>-</sup>), and consequently the formation of hydrogen peroxide (H<sub>2</sub>O<sub>2</sub>) and peroxynitrite. The effect of BH<sub>4</sub> is attenuated by the NOS inhibitor, L-NAME, the NO scavenger, PTIO, and by oxidative stress. Antioxidant agents such as superoxide dismutase (SOD) augment its effect.
